SAFETY MANAGEMENT AND CONTROL SOLUTION FOR COAL MINE INDUSTRY

SUMMARY

Power is the main power of coal mine production equipment, so the stable and reliable operation of power supply and distribution system of coal mine enterprise is the guarantee base of coal mine enterprise safety production, and the safety of power supply operation and maintenance is the key to create a safe base.

The whole process of operation, maintenance and repair of power supply system in coal mine enterprises is realized by the system, including safety management and control, information monitoring and state early warning, eliminating potential hazards of equipment, effectively preventing accidents, and helping coal mine enterprises to build a whole process and all-round safety production management system.

ADVANTAGE

The system effectively guarantees the stable and reliable operation of the overall power supply system of coal mine enterprises, eliminates hidden safety hazards of equipment, prevents accidents, reduces and avoids accident losses, and builds a comprehensive safety management system for power supply operation and maintenance operations.

Full coverage

Identify, analyze and determine the hazard sources with technical means, predict the safety situation and accident ways, and improve the level of safety control.

Intelligent and timely

Ensure the intelligent identification and rapid response of regional safety monitoring, equipment status identification, personnel safety control and operation environment analysis.

Comprehensive

It runs through the whole process of power supply operation and maintenance, involving primary and secondary error prevention, operation billing, maintenance operation, lock control management, safety equipment management, video monitoring and other services.

Real time

It realizes the interconnection of electrical operation process information, data integration and sharing, and finally achieves the association and sharing of business data and safety production evaluation and auxiliary decision-making.
