

UT-7710 Safety Tools Management Device

SUMMARY

There are many kinds of safety tools and instruments stored in the tool rooms of substations, power plants and industrial and mining enterprises, including insulating gloves, insulating shoes, safety helmets, test rods, temporary ground wires, etc. The product can carry out electronic identity identification for safety tools, and manage the life cycle and use cycle of all the safety tools.

ADVANTAGE

Adding or cutting inventory

Real time monitoring of access process of safety tools.

Online inventory

It can carry out online inventory of safety tools and instruments, display the account information of tools and instruments, standardize asset management and improve the efficiency of asset inventory.

Life cycle management

Support the life cycle management of safety tools and instruments from collection, inspection to scrapping.

Regular inspection function

According to the inspection cycle of all kinds of tools and instruments, it can automatically conduct regular inspection and generate inspection report, and support the functions of retrieval, query and report printing.

Real time remote monitoring and history query

It can query the real-time status and historical access records of safety tools, and realize remote web mode to query the real-time status of safety tools.
