

UT-F500P10 Misoperation Prevention by Electriferous Detection System

SUMMARY

This product applies the high-voltage live indicating device with switching error prevention interface. Before the operation of the equipment, it should finish the electriferous detection, which can effectively solve the misoperation behaviors in the operation of the distribution network equipment, and ensure the safety of the equipment and the operators.

ADVANTAGE

Simple structure

The system structure is simple and can be deployed flexibly according to the needs.

Strong practicability

The system is effective and fast.

Easy to install

The high voltage live indicating device with anti misoperation interface adopts standard interface, and installation and replacement need not power off.
