# UT-F600H12 Shift Management System for Rail Transit Crew

SUMMARY

The dispatching management system includes basic data management, dispatching table generation, crew dispatching management, attendance and departure management, education and training, information display and other modules. The system can replace the traditional manual dispatching mode, realize the intellectualization and automation of crew dispatching, and carry out safety control on the whole process of subway crew attendance and departure, improve work efficiency and ensure driving safety.

ADVANTAGE

Intelligent crew dispatch

According to the train diagram and operation rules, the system intelligently compiles efficient and reliable train dispatching plan and dispatching plan.

Comprehensive attendance control

According to the attendants' attendance plan, the attendants' attendance status can be comprehensively judged by means of fingerprint, alcohol testing and answering questions.

Electronic record management

Automatic statistics of crew working hours, running kilometers, examination results and other related data information, form analysis report, provide data support for relevant decisions.

ACHIEVEMENT

- Tianjin Metro
- Xian Metro
- Shenzhen Metro
