

UT-5800 Series of Protection Relays

SUMMARY

This product is a new generation of self-controlled products. The complete set of devices can be used in intelligent substations and conventional substations, supporting electronic and conventional mutual inductors, and can be used in substations of 6kV-110kV voltage levels, power plants and substations.

ADVANTAGE

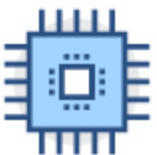

Standardization

Designed according to the latest standards of the State Power Grid.

Flexible

The same type of product has a variety of models to meet various substation communication structures.

Powerful function

It has acquisition and execution unit, smart terminal, merge unit, intelligent integration unit and other devices to meet the construction needs of a new generation of smart substation.

Strong capability

The unit uses a whole panel and a fully enclosed chassis, strong and weak electricity strictly separated. And it is with strong anti-interference ability.
