

UT-5700 Series of Protection Relays

SUMMARY

This product integrates protection, measurement, control, monitoring, communication, event recording, fault recording and other functions. It is suitable for ring net cabinets and switch cabinets of 6kV~20kV voltage level. The function covers protection, measurement and control of in-and-out lines, distribution transformers and other devices, as well as for automatic transferring.

ADVANTAGE

Easy installation

The small integrated cabinet makes installation convenient and flexible. It is suitable for on-site installation of ring net cabinets.

Efficient device

It is not necessary to install the automatic transfer relay separately which can save cost and be more efficient.

Intelligent switch input

Each switch input name supports user-defined selection and is more user-friendly, making the display of the device consistent with the actual wiring.

Safe operation

In-and-out line protection devices can quickly and accurately remove faults and prevent over-level trips through network ports based on IEC61850 GOOSE communication standard, real-time interactive status data and blocking data.
