

# UT-5280 Microenvironment Monitoring Device

## SUMMARY

This product is used for fine measurement and control of environmental parameters in local space. It can collect temperature and humidity, water immersion, door switch status, contact status, and dehumidify and drain the environment according to the results of data analysis. Monitoring information can be accessed to the cloud platform through wireless network, and can be viewed through web browsing on PC or through the handheld mobile terminal.

## ADVANTAGE

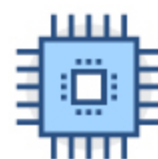

### Perfect performance

Compact appearance, full function, door magnetism, water immersion, temperature and humidity, etc.

### Supports all wireless mode

433M wireless communication between the terminal and the sensor; the terminal can access the cloud platform or local monitoring system wirelessly.

### Smart control

Performs specific functions or relay outbound based on in-place logical and numerical operations.

### Mobile notification

Supports SMS alerts, handheld APP queries and multiple ways of interaction.
