

JOYO-AF Auxiliary Monitoring and Management System

SUMMARY

This product integrates video intelligent analysis, 3D modeling, intelligent control, linkage and other technologies, and achieves on-line monitoring and intelligent control of substation power environment, image, fire alarm, lighting, heating and ventilation, security alarm, access control and other information and equipment on a unified platform.

ADVANTAGE

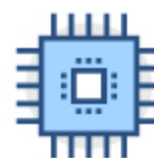

Unified Management

Highly integrated and unified management mode to achieve data sharing, unified interface, easy operation and management.

3D Monitoring

Using three-dimensional reality, data fusion, simulation.

Intelligent Monitoring

Fuse video analysis technology to achieve intelligent warning and automatic control.

Linkage Visualization

Warning linkage, patrol linkage function.
